

# APRIL 2020 NEWSLETTER

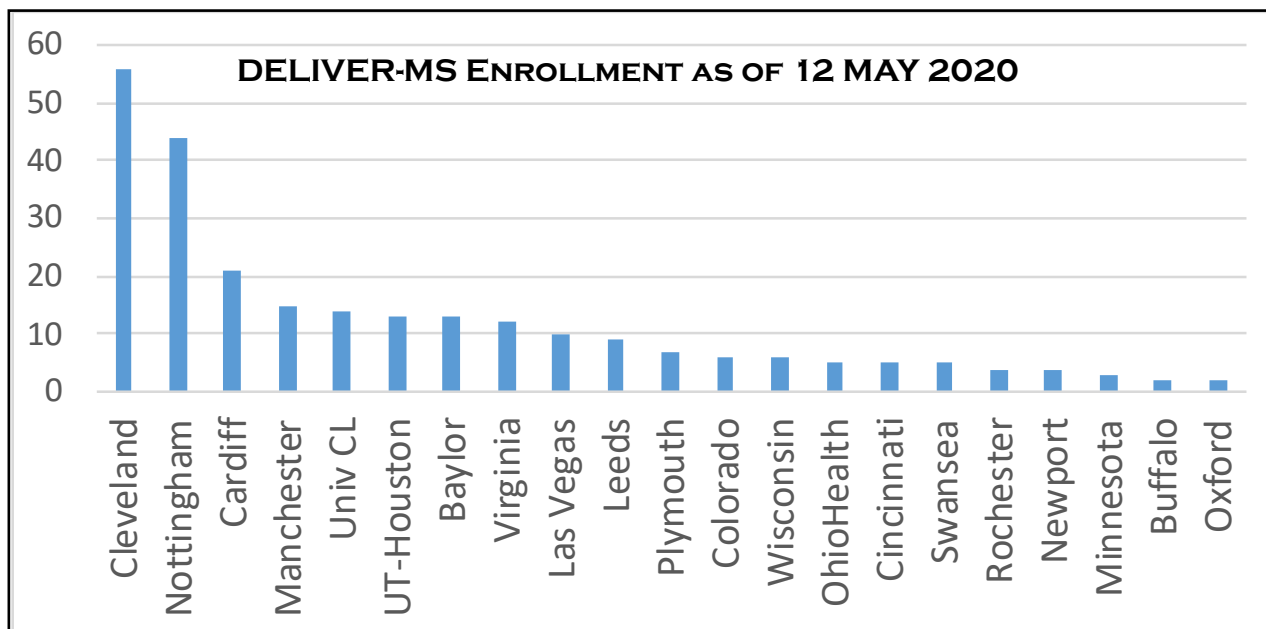

Does early treatment with highly effective DMT improve prognosis for people with MS?

## WELCOME TO THE DELIVER-MS NEWSLETTER

We know that the uncertain threat of COVID19 continues to cause upheaval for many of you at the moment.

Even in the face of the COVID-19 outbreak, some people with MS will still need to start a new DMT. In line with this, a low level of recruitment activity continues. We remind you that any eligible patient who is attending your centre to commence DMT can be screened into the Observational Arm and you have 90 days to acquire baseline data. If baseline data cannot ultimately be collected within the 90-day window, then they will simply screen out.

## FINAL THOUGHTS

We are hope you all stay well in the coming weeks.

Do reach out to us with any questions about the running of DELIVER-MS
