

## FEBRUARY 2023

Does early treatment with highly effective DMT improve prognosis for people with MS?

I have to admit that when we started the DELIVER-MS study all those years ago, I did not think I would still be writing Newsletters on study enrolment in 2023! Each month I try to find new ways to say the same thing... ***“we are so close, just a few more participants and we will be fully enrolled”***...

This month I am saying just two things:

**PLEASE  
HELP US  
RECRUIT**

---

## FINAL THOUGHTS:

**The observational arm is now closed!** In order to complete enrolment to the randomised trial by June 2023 we still need ~2 participants per week (globally). Every participant counts now. Thanks again for all your efforts.
