

JANUARY 2024

Does early treatment with highly effective DMT improve prognosis for people with MS?

Happy New Year from the DELIVER-MS team! We hope you had a nice break over the holiday period. We are excited to say that we **only have 3 spots remaining** on the DELIVER-MS trial! The majority of the recent enrolments have been in Cleveland, Cardiff and Nottingham, but we are so grateful to **Oxford** and **Virginia**, who have both recruited new

participants since the last newsletter. Who will take the final spots? Thanks again for all your help.

NEWS AND UPDATES

-  All participants reaching 36M must have their MRI scan **performed on the same scanner as baseline scans**. If the 36M scan does not occur, the participant will not contribute to the primary analysis; in other words their participation will be more or less wasted.
-  As participants reach Month 36, please remember to ask them to complete the Post Study Participant Review (see deliver-ms.com > Investigator Portal > Source Documents).
-  The DELIVER-MS long term extension study is now live. Any participant reaching 36M can enter this 3-year extension study.

FINAL THOUGHTS:

Can you imagine how excited we will be to finally complete recruitment to DELIVER-MS? I hope we can share that news soon. Thank you for helping us achieve this goal.
