

# SEPTEMBER 2023

Does early treatment with highly effective DMT improve prognosis for people with MS?

It is common to see a drop off in trial recruitment over the summer months, so we were delighted to see several recruits over August on both sides of the Atlantic. Aside from the sterling performance of Cleveland Clinic, we are hugely grateful to VCU (USA) who continue to contribute significantly to reaching our goal. See below for updates on the Long-term Extension study.

**15 more  
participants  
needed!**

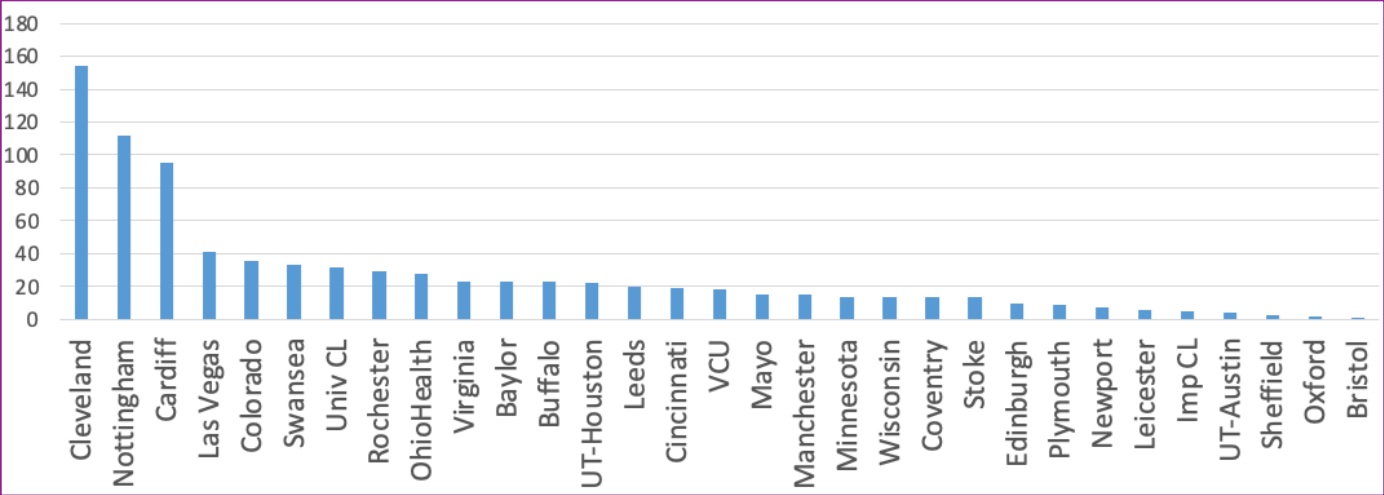

---

## LONG-TERM EXTENSION

We are excited about the first participant reaching Month-48 in Cleveland this week. When participants reach Month-36 they can now be enrolled into the Long-term extension study. The study schedule is even more pragmatic in years 4 to 6 so we hope that sites and participants will take part. **Research MRIs are not required in Year 4-6**, but we will provide costs for sites to upload any standard of care MRI brain scans to the Cleveland Imaging Lab for analysis. **Ability will become the main focus** of the extension study.

# OVERALL RECRUITMENT

---

## FINAL THOUGHTS:

Can you contribute to us completing recruitment to the DELIVER-MS study? We are hugely grateful for all of your efforts.
