

# SUMMER 2024

Does early treatment with highly effective DMT improve prognosis for people with MS?

**800!**

**We did it!**

We are delighted to say that after all of your hard work, **we have reached our target of 800 people in DELIVER-MS!** Thanks to Minnesota and Stoke who helped us to find the final few participants to allow us to reach our target. If there are any final potential participants lined up, do not despair since we are able to accept any additional participants up until the end of March 2024. By recruiting a few extra people we will help to retain statistical power despite some participants having screen-failed / withdrawn.

---

**FINAL THOUGHTS:**

Once again, we just want to acknowledge the massive team effort that has been required to complete study recruitment. We look forward to being in touch with the first details on the final study cohort soon. Then our focus will be on ensuring as many people as possible remain under follow-up and enter the extension study.
